

# Meandu Mine

2014 - 2020

## PROJECT HISTORY

### SPECIALISED MAINTENANCE SERVICES

After successfully completing the ROM Refurbishment Projects in 2014 & 2015, IPCQ was engaged in to assist with coating remediation after the CHPP Structural Steel Integrity Audit in August 2016.

IPCQ and the site's maintenance team formed a partnership to establish and implement a coating maintenance programme with a proactive approach that will ultimately reduce structural repair and extend the asset's lifecycle.

IPCQ constructed a purpose-built blast & paint igloo on site in July 2017. This provides the Meandu team a cost effective, environmentally friendly & reliable option for blasting & painting requirements on site. Additionally, it provides reductions in lost time due to inclement weather & plant down-time.
