

Dalrymple Bay Coal Terminal

CONTRACT AWARD

PROJECT BRIEF

With over 12Mm2 of carbon steel alone, DBCTM engaged IPCQ in 2017 to support and enhance the existing maintenance programme on site. IPCQ's brief was to provide continuity and accountability to gain traction and deliver superior abrasive blasting and coating remediation works. Since our initial mobilisation, IPCQ has completed two additional swings and was subsequently invited to tender for the Supplementary Site Maintenance Labour contract. We are pleased to announce that we have been awarded this 3 year Contract which will commence in July 2018. Our aim will be to continue to offer pride & ownership in our work, to foster a positive culture & maintenance philosophy on site and to offer innovation through the use of specialised equipment, materials, techniques and expertise. We will strive to contribute to the common goal of bringing structural repair back to coatings maintenance.
