

Environmental Policy

IPCQ Pty Ltd is committed to minimising the impact of operations on environmental systems in accordance with the *Environmental Protection Act 1994*. Compliance is principally maintained via the implementation of an Integrated Environmental Management System (IEMS), which is informed by the Operators Environmental Guide (OEG) for Abrasive Blasting Workshops issued by the Brisbane City Council.

IPCQ considers environmental best practice to be vital to the ultimate success of the organisation's operations and is an integral part of management's responsibilities.

The IEMP includes a number of objectives, which have been developed in order to increase business performance and simultaneously reduce environmental risks through good management practices.

Objectives

- To clearly set out the environmental objectives, conditions and methods in which compliance will be accomplished. This creates the opportunity for better practices to be developed, greater monitoring of performance, and the keeping of relevant records.
- To demonstrate exemplary environmental performance and energy efficiency
- To implement and maintain a waste system within the site which minimises the release of off-site emissions of discharges.
- To increase staff awareness of environmental issues by providing guidelines for staff training and induction into IEMS practices.

Implementation

IPCQ Pty Ltd maintains environmental best practice by encouraging and respecting contributions by all employees towards achieving environmental best practice by providing adequate information, instruction, training and supervision.

Environmental Protection is everyone's responsibility
